Without Skeletons

More than 98 percent of all animal species have no bony vertebrae or skeletons and are collectively classified as invertebrates.

# Read Online Animals Without Skeletons

Jellyfish, octopuses, worms, snails, crabs and lobsters, insects, squid and sea stars are some common examples. The invertebrate designation has no bearing on the biological traits or characteristics of the species.

Which Animals Have No Skeletons? - Reference.com

Soft-bodied organisms are animals that lack skeletons. The group roughly corresponds to the group Vermes as proposed by Carl von Linné. All animals have muscles but, since muscles can only pull,

## Read Online Animals Without Skeletons

never push, a number of animals have developed hard parts that the muscles can pull on, commonly called skeletons. Such skeletons may be internal, as in vertebrates, or external, as in arthropods.

However, many animals groups do very well without hard parts. This
