Charge comes in 2 types, positive and negative and is measured in Coulombs (C). If you have a charge on its own it emits a field in all directions. The field from a charge is represented by E as in E-lectricity. If you put another charge in the field it

Students will learn fundamentals of electromagnetic fields, from waves guided by transmission lines to generalized Maxwell's equations and Poynting's theorem. The learning process will be facilitated by examples from the electric energy system practice and lightning research. Practical aspects, such as the electromagnetic skin effect, will be

Fundamentals of Electromagnetic Fields

To summarise, electrostatics can be described in terms of two vector partial differential equations $\nabla \cdot \mathbf{E} = \rho$ (1.9a) and $\nabla \times \mathbf{E} = 0$ (1.9b) representing four scalar partial differential equations. Electromagnetic Field Theory - Physics Department

Electrodynamics is creating a magnetic field from an electric current. When electricity passed through a wire, a magnetic field is created around the wire. Looping the wire increases the magnetic field. Adding an iron core greatly increases the effect and creates an electromagnet. You can also create an electromagnet without the iron core.
