Research in Education

Evaluate the methodology.

Determine if the data used were relevant to the research question.

Also be sure to look at the way the data were collected. For example, if data should have been collected from a random sample, but it was not, the results of the research could be flawed.

How to Evaluate Research | The Classroom

Control group design. A common way to evaluate the effects of an independent variable is to use a control group. This group is usually similar to the participant group, but either receives no intervention at all, or receives a different intervention with the

same goal as that offered to the
participant group.

Section 4. Selecting an Appropriate Design for the Evaluation

The research design sets the parameters of your project: it determines exactly what will and will not be included. It also defines the criteria by which you will evaluate your results and draw your conclusions. The reliability and validity of your study depends on how you collect, measure, analyze, and interpret your data.

How to Design and Evaluate
Research in Education ...

Heuristic evaluation (Nielsen and Molich, 1990; Nielsen 1994) is a usability engineering method for finding the usability problems in a user interface design so that they can be attended to as part of an iterative design process. Heuristic evaluation involves having a small set of evaluators examine the interface and judge its compliance with recognized usability principles (the "heuristics").
