Students with Mild General Learning Difficulties (MGLD) have significantly below-average general intellectual functioning (Griffin & Shevlin 2011; NCSE 2014; Westwood 2015). This is reflected in a slow rate of maturation, reduced learning capacity and inadequate social adjustment. MGLD may also manifest itself in delayed conceptual development, difficulties in expressing ideas and feelings in words, a limited ability to abstract and generalise content learnt, limited attention-span and poor ...

*Learning Disabilities and Related Disabilities: Strategies ...*  
One of the most common learning characteristics of children with mild disabilities, indeed all disabilities, is that they have difficulty mastering academic content. In addition, these students frequently have difficulty with social behaviors and in finding appropriate work once their formal schooling ends (Olson & Platt, 2000).

What are Mild Disabilities?

People with learning disabilities do not learn certain skills as quickly as other people and may therefore need extra help in certain aspects of their lives. The specific skills in question will depend upon the type of disability. People with mild learning disabilities may live alone, travel independently, and work.

Updated to meet the needs of a new generation of teachers and students. As reflected in the new title, Learning Disabilities and Related Mild Disabilities now includes a cross-categorical emphasis, making it suitable to a broader number of courses. Specifically, the text now accommodates the increased number of courses aimed at teaching students with mild disabilities that are part of many states' certification requirements. Researchers are finding that many students with learning disabilities exhibit coexisting related disorders such as ADHD, Asperger's Syndrome, and nonverbal learning disabilities. Preservice and in-service classroom teachers, who are increasingly responsible for teaching students with special needs within general education or inclusive classrooms, will find this new edition especially helpful. The text describes the characteristics of various mild disabilities and offers teaching strategies for general education teachers, special education teachers, school psychologists, and other related professionals. All of the text's new coverage and special features were developed to align with the Cengage Learning Education Mission Statement--Bridging the gap from preservice to practice--to help new teachers be successful in their future classrooms, and with their future students. A non-categorical, characteristics approach to addressing high-prevalence mild disabilities. Learners with Mild Disabilities: A Characteristics Approach focuses on high-prevalence disorders affecting school learners today, including mild intellectual disabilities, learning disabilities, emotional/behavioral disorders, ADHD, autism spectrum disorders, and communication disorders, as well as on low incidence conditions that may manifest in the milder range, for example sensory, physical, health, or TBI. The author lays the foundation for addressing the needs of special learners and then focuses on learners from the perspective of alternative non-categorical frameworks. She describes students with disabilities and related conditions with respect to a variety of individual strengths and needs, considering their cognitive, language, academic learning, and social/emotional characteristics. Readers see how to apply these conceptual frameworks by analyzing a number of vignettes and extended case studies based on the experiences of real children and teachers. Designed as a primary

Children living in poverty are more likely to have mental health problems, and their conditions are more likely to be severe. Of the approximately 1.3 million children who were recipients of Supplemental Security Income (SSI) disability benefits in 2013, about 50% were disabled primarily due to a mental disorder. An increase in the number of children who are recipients of SSI benefits due to

Mental disorders has been observed through several decades of the program beginning in 1985 and continuing through 2010. Nevertheless, less than 1% of children in the United States are recipients of SSI disability benefits for a mental disorder. At the request of the Social Security Administration, *Mental Disorders and Disability Among Low-Income Children* compares national trends in the number of children with mental disorders with the trends in the number of children receiving benefits from the SSI program, and describes the possible factors that may contribute to any differences between the two groups. This report provides an overview of the current status of the diagnosis and treatment of mental disorders, and the levels of impairment in the U.S. population under age 18. The report focuses on 6 mental disorders, chosen due to their prevalence and the severity of disability attributed to those disorders within the SSI disability program: attention-deficit/hyperactivity disorder, oppositional defiant disorder/conduct disorder, autism spectrum disorder, intellectual disability, learning disabilities, and mood disorders. While this report is not a comprehensive discussion of these disorders, *Mental Disorders and Disability Among Low-Income Children* provides the best currently available information regarding demographics, diagnosis, treatment, and expectations for the disorder time course - both the natural course and under treatment.
