A paradigm shift in the ways in which mental health services are delivered is happening—both for service users and for professional mental healthcare workers. The landscape is being changed by a more influential service user movement, a range of new community-based mental healthcare programmes delivered by an increasing plurality of providers, and new mental health policy and legislation. Written by a team of experienced authors and drawing on their expertise in policy and clinical leadership, *Working in Mental Health: Practice and Policy in a Changing Environment* explains how mental health services staff can operate and contribute in this new environment. Divided into three parts, the first focuses on the socio-political environment, incorporating service user perspectives. The second section looks at current themes and ways of working in mental health. It includes chapters on recovery, the IAPT programme, and mental healthcare for specific vulnerable populations. The final part explores new and future challenges, such as changing professional roles and commissioning services. The book focuses throughout on the importance of public health approaches to mental healthcare. This important text will

This book explores the relationship between policing and mental health. Police services around the world are innovating at pace in order to develop solutions to the problems presented, and popular models are being shared internationally. Nevertheless, disparities and perceptions of unfairness remain commonplace. Innovations remain poorly funded and largely unproven. Drawing together the insights of eminent academics in the UK, the US, Australia and South Africa, the edited collection evaluates the condition of mental health and policing as an interlocked policy area, uncovering and addressing a number of key issues which are shaping police responses to mental health. Due to a relative lack of academic texts pertaining to developments in England and Wales, the volume contains a distinct section on relevant policies and practices. It also includes sections on US and Australian approaches, focusing on Crisis Intervention Teams (CITs), Mental Health Intervention Teams (MHITs), stressors and innovations from Boston in the US to Queensland in Australia. Written in a clear and direct style, this book will appeal to students and scholars in policing, criminology, sociology, mental health, cultural studies, social theory and those interested in learning about the condition and trajectory of police responses to mental health. Foreword written by Professor Maurice Punch.

Clear, comprehensive, and accessible, this textbook presents an overview of the contemporary American mental health system and its impact on clients and social workers. The failure of the system to provide quality care for the mentally ill is explored, including issues and policies that social workers face in accessing mental health care for their clients, while also discussing the ways in which social workers can improve the overall functioning of the system and promote the development and expansion of policy and practice innovations. This is the first textbook to examine the lack of understanding of the roots of mental illness, the challenges in classification of mental disorders for social workers, and difficult behavioral manifestations of mental illness. By looking at the flaws and disparities in the provision of mental health services, especially in relation to the criminal justice system and homelessness and mental illness, social work students will be able to apply policy and practice to improve mental health care in their everyday work. A focus on the lived experiences of the mentally ill and their families, along with the experiences of social workers, adds a unique, real-world perspective. Key Features:
