"Pervasive sensing is simply the use of sensors to capture data on anything in a plant that could affect its operation. It is driven to a large extent by the increasing availability of inexpensive sensors -- many of them wireless. Pervasive sensing comes down to use of multiple sensors everywhere, often (but not always) wireless."

the high cost, disruptions and time required to add wired sensors and analyze the data. Pervasive sensing applications enabled by wireless sensors and networks address these issues, allowing you to quickly and cost-effectively gain new strategic data, delivering actionable information you can use to quickly improve your operations.
