Inspecting Psychology takes a sleuth's magnifying glass to the interplay between psychology, psychiatry and detective fiction to provide a unique examination of the history of psychology. As psychology evolved over the centuries, so did crime writing. This book looks at how the psychological movements of the time influenced classic authors from Agatha Christie and Arthur Conan Doyle to Dorothy Sayers and Georges Simenon, to reveal an enduring connection between psychology and the human need to solve mysteries. Some key puzzles. Why did Agatha Christie make so many doctors killers in her books? Why did Simenon not become a psychiatrist? Did Lord Peter Wimsey have all the charm, passion and tenderness no lover gave Dorothy Sayers? Beginning with the earliest origins of psychology in Greek literature alongside the Oedipal story and the ideas of Aristotle, the book travels through to the late 18th and 19th centuries and the work of Edgar Allan Poe who wrote the first detective story proper. With the birth of modern psychology in the late 19th century, the growing fascination with understanding behaviour coincided with the popular whodunnit. Readers are whisked through the development of psychology in the 20th century and beyond, from the impact of shell shock in the First World War and the early understanding of mental illness through to the growth of psychoanalysis and the ideas of Freud, behaviourism and attachment theory. At every stop on this original rattle through history, David Cohen reveals the influence these psychological movements had on crime writers and their characters and plots. The result is a highly enjoyable, engaging read for those interested in how the unique pairing of the history of psychology with the history of the detective novel can unveil insights into the human condition. It should appeal to anyone interested in psychology who wants their subject served with a thriller on the side.

A smart and funny book by a prominent Harvard psychologist, which uses groundbreaking research and (often hilarious) anecdotes to show us why we're so lousy at predicting what will make us happy - and what we can do about it. Most of us spend our lives steering ourselves toward the best of all possible futures, only to find that tomorrow rarely turns out as we had expected. Why? As Harvard psychologist Daniel Gilbert explains, when people try to imagine what the future will hold, they make some basic and consistent mistakes. Just as memory plays tricks on us when we try to look backward in time, so does imagination play tricks when we try to look forward. Using cutting-edge research, much of it original, Gilbert shakes, cajoles, persuades, tricks and jokes us into accepting the fact that happiness is not really what or where we thought it was. Among the unexpected questions he poses: Why are conjoined twins no less happy than the general population? When you go out to eat, is it better to order your favourite dish every time, or to try something new? If Ingrid Bergman hadn't gotten on the plane at the end of Casablanca, would she and Bogey have been better off? Smart, witty, accessible and laugh-out-loud funny, *Stumbling on Happiness* brilliantly describes all that science has to tell us about the uniquely human ability to envision the future, and how likely we are to enjoy it when we get there.
