The book was written for the mental health professional, be they graduate students or seasoned professionals of all mental health disciplines. It is not for the general public. It is not a self-help, do it yourself book. The motive was to share with his colleagues, around the globe, either engaged in actively treating Dissociative Identity Disorder (DID) clients or those considering expanding their practice into the area of DID or graduate students with his positive experiences in bringing all the DID true alters together without re-traumatizing them through the use of abreaction or any form of it. The author will be taking you, step by step, on his 27-year journey of discovery in the diagnosis and treatment of DID. First and foremost you will discover the answer to the challenge, "How to fuse alters without causing them to be retraumatized over and over again, through abreaction." He does it in 60 seconds or less, and they stay together. Secondly, He shares a well known, but apparently seldom used, "question" that shortens the diagnosis of DID from month's to seconds. He describes the scientific basis for his "As If" technique and offers four variations: One from a Judeo/Christian perspective, one from a secular perspective, one from a Wiccan perspective, and a variation for young children. With client consent, the author allows the reader to sit in on various therapy sessions. To witness, first hand, the inner workings of his techniques from the normal to the bazaar. Finally, several successful fully integrated clients graciously volunteered to include their personal testimonies. You will be moved, inspired and hopefully motivated to get involved in treating DID by the personal accounts of their courageous journey to full integration without abreaction. The book was deliberately kept short so that anyone could conceivably read it in one sitting to get the full impact. One can imagine how much material one can collect in 27 years. The notes have been gleaned to give the reader the most salient aspects of Dr. Flora's techniques. In the future, as feedback comes in, the author will be including pertinent additions. Do not make the mistake of dismissing the techniques because they appear too good to be true. These techniques appear simple and they are but they work. I challenge all of you to consider supplementing your techniques with these tried and true methods of removing the hurt, pain and suffering for both your clients/patients and yourselves. If as a nameless therapist wrote in his book, don't you become desensitized by using abreaction to bring true alters together. Even if it does not bother you at all, remember our pledge "Do No Harm." I know abreaction works but a famous therapist said, (You can find his name in the book) "Abreaction is like surgery without anesthesia." I rest my case. Consider your client and try the "As If" technique for everybody's benefit. The authors goal is final fusion. However, his experience, as others, is many DID clients drop out of therapy before the goal is achieved for various reasons. We stand on the shoulders of those who have gone before us. We owe them a debt of gratitude. We still have much to learn as it's said in the text, This is a work in progress. To all my colleagues keep up the good work and to

those on the sidelines, JOIN US! YOU ARE NEEDED TO BRING HEALING AND MEANING INTO THE LIVES OF OVER 107,115,000 DID SUFFERS AROUND THE WORLD!

The following is an edited version of what was written by a middle-aged married Caucasian female, mother of three who originally presented with 137 alters. She writes from her perspective as experiencing the transition from the "modified abreactive therapy" to the non-abreactive "As If" technique in the early 1990's. (Note: The complete narrative is in CHAPTER SEVEN.) She wrote: "It has decreased the amount of time it takes to join and integrate alter personalities in the core. This method eliminates the suffering and perceptual disturbances associated with joining alters together. In the past, I have endured the discovery and integration process of 43 alter personalities, each joining like a climax after a period of painful discovery. Through my experience, it has become evident that the use of abreaction is totally unnecessary. It is not necessary to re-experience the pain in order to heal. I can tell you from the other side of the coin because I am a multiple personality. My hope is that the mental health professionals will listen to me. Dr. Flora, whom I have been in therapy with for 12 months has developed a technique not utilized by other professionals working with multiple personalities. He does not believe in the use of abreactions. If great pain is present in an alter personality he takes the pain away and processes the experience separate from reliving the traumatic experience. There has been enough suffering. Why should one need to re-experience it? All past trauma has already been experienced in some part by one or more alters. It is only necessary to bring that experience into the core. By joining an alter into the core personality a veil of energy is removed and the knowledge is absorbed. It is not necessary to relive trauma by the core personality. By the use of this method of Dr. Flora's, I have been spared great suffering. It is my desire to proclaim this truth to all mental health professionals in an attempt to reduce the unnecessary suffering in integrating multiple personalities." (Note: Her final fusion of the 247th alter took place in 1998 and she has been dissociative-free ever since. You can read her testimony in CHAPTER FOURTEEN: TESTIMONIALS.)

Offers an account of child genius Taylor Wilson's successful quest to build his own nuclear reactor at the age of 14, and an exploration of how gifted children can be nurtured to do extraordinary things. 35,000 first printing. Illustrations.

The fusion of information from sensors with different physical characteristics, such as sight, touch, sound, etc., enhances the understanding of our surroundings and provides the basis for planning, decision-making, and control of autonomous and intelligent machines. The minimal representation approach to multisensor fusion is based on the use of an information measure as a universal yardstick for fusion. Using models of sensor uncertainty, the representation size guides the integration of widely varying types of data and maximizes the information contributed to a consistent interpretation. In this book, the general theory of minimal representation multisensor fusion is developed and applied in a series of experimental studies of sensor-based robot manipulation. A novel application of differential evolutionary computation is introduced to achieve practical and effective solutions to this difficult computational problem. Contents: Introduction to Multisensor Integration Multisensor Data Fusion Multisensor Fusion in Object Recognition Minimal Representation Environment and Sensor Models Minimal Representation Multisensor Fusion and Model Selection Multisensor Fusion Search Algorithms Applying the Abstract Framework to Concrete Problems Multisensor Object Recognition in Two Dimensions Multisensor Object Recognition in Three Dimensions Laboratory Experiments Discussion of Experimental Results Readership: Engineers and researchers in robotics and artificial intelligence. Keywords: Multisensor Fusion; Representation Framework; Intelligent Systems; AND/OR Representation; Knowledge Representation; Sensor Fusion; Intelligent Systems; Task Plan; Robotic Systems; Automation; Vision and Touch; Computer Vision; Pose Estimation; Correspondence Problem; Object Recognition; Haptic Recognition; Differential Evolution; Evolutionary Algorithms; Minimum Description Length; Minimal Representation

In the darkness beyond life, something stirs. Now a childless mother must decide how far she will go to protect her dead daughter. Behind the oppressive reality of abuse, depression and suicide, there is light on the edge of the darkness. "The Devourer" is a psychological horror novel that goes beyond the classic paranormal genre.

Have you ever wondered what the future may look like? In this book, you'll explore 10 ways technology could alter our way of life. The challenge for you is to decide which changes you want for yourself and the world. In the future, will we teleport from place to place, keep dinosaurs as pets, or 3D-print our dinner? Will we live on Mars or upload our brains to computers? Could we solve climate change by making all our energy from mini stars we build here on earth? In this book, you'll meet the scientists working to bring science fiction to life and learn how soon we might have amazing new technology. You'll also delve deep into questions about right and wrong. Just because we can do something doesn't mean we should. How can we build the best possible future for everyone on Earth?

Virtually all academic books on American third parties in the last half-century assume that they have largely disappeared. This book challenges that orthodoxy by explaining the (temporary) decline of third parties, demonstrating through the latest evidence that they are enjoying a resurgence, and arguing that they are likely to once again play a significant role in American politics. The book is based on a wealth of data, including district-level results from US House of Representatives elections, state-level election laws after the Civil War, and recent district-level election results from Australia, Canada, India, and the United Kingdom.

International Review of Cytology

This book provides an overview of Federated Learning and how it can be used to build real-world AI-enabled applications. Real-world AI applications frequently have training data distributed in many different locations, with data at different sites having different properties and different formats. In many cases, data movement is not permitted due to security concerns, bandwidth, cost or regulatory restriction. Under these conditions, techniques of federated learning can enable creation of practical applications. Creating practical applications requires implementation of the cycle of learning from data, inferring from data, and acting based on the inference. This book will be the first one to cover all stages of the Learn-Infer-Act cycle, and presents a set of patterns to apply federation to all stages. Another distinct feature of the book is the use of real-world applications with an approach that discusses all aspects that need to be considered in an operational system, including handling of data issues during federation, maintaining compliance with enterprise security policies, and simplifying the logistics of federated AI in enterprise contexts. The book considers federation from a manner agnostic to the actual AI

models, allowing the concepts to be applied to all varieties of AI models. This book is probably the first one to cover the space of enterprise AI-based applications in a holistic manner.

Provides new insights into contemporary debates surrounding the metaphysics of objects, a subject undergoing an important revival.
